

Recent seismicity map of the area close to the epicenter (red circle with yellow profile) of the target event ($\pm 1^\circ$ Latitude-N; $\pm 1^\circ$ Longitude-E).

The epicenters of the earthquakes (red circles with dimension proportional to the magnitude values) are deduced from both the **Italian Seismic Bulletin**, available at <http://bollettinosismico.rm.ingv.it/>; <http://cnt.rm.ingv.it/bsi>, and the **ISIDE** database (Italian Seismological Instrumental and parametric Data-base), available at <http://cnt.rm.ingv.it/iside>.
